WALKER HILDEBRAND

204 898 4936 wbhildeb@uwaterloo.ca

O wbhildeb **in** wbhildeb

TECHNICAL STRENGTHS

Languages $C++\cdot C\#\cdot Python\cdot Javascript\cdot Shell Scripting\cdot Java\cdot SQL$

EDUCATION

University of Waterloo

Expected Apr 2022

Bachelor of Computer Science (88% major avg)

President's Scholarship of Distinction

WORK EXPERIENCE

Facebook/Meta | Network Delivery Systems - Monitoring

August 2021 - Present

- Implemented a stream processing pipeline to analyze the health of Meta's entire network
- Drastically improved error-identification by providing more accurate, actionable and live data
- Presented my research into pipelined network analysis to help plan future versions of this service

NVIDIA | TensorRT - Graph Compiler Integration

January 2021 - April 2021

- Implemented validation for engine compilation and inference of Tacotron2 + Waveglow speech synthesis using Jasper model for speech recognition, primarily testing dynamic sequence length input
- Developed accuracy tests for TensorRT's INT8 support via Quantization-Aware Training with BERT, compared to ONNX runtime and native PyTorch over the Stanford Question Answering Dataset
- Prepared the release of TensorRT 8.0 by working on several compiler-related, release-blocking bugs

NVIDIA | Hardware Infrastructure

May 2020 - August 2020

- Implemented a QuadTree class and nearest neighbour algorithm using a thin template design
- Optimized object describination and cached common resources, reducing boot time from 6 mins to 1
- Implemented several important general enhancements throughout the suite of NVIDIA's CAD tools
- Researched and implemented changes for porting several CAD tools to use an updated version of Qt and summarize methods for faster rendering of objects using the Qt's OpenGL interface

McAfee | WebAdvisor

Sep 2019 - Dec 2019

- Developed a messaging system between the testing framework and extension that exposed internal functionality to testers, but kept the application's internals secure from the public
- Created a proxy server with C# and Powershell to mimic responses of the extension's HTTPS requests
- Researched, built and modified Chromium source code to provide a McAfee browser proof of concept
- Created an internal tool for manipulating and backing up the LevelDB and IndexedDB implementation of Chrome and Firefox's browser.storage.local API

Rocscience | Settle3D Developer

Jan 2019 - Apr 2019

• Created a CAD module to model the construction of complex 3D embankment loads and conduct time-dependant vertical soil consolidation analysis using C++, MFC and OpenGL s

Payworks | Testing Automation Framework

May 2018 - Oct 2018

• Deployed the automated testing framework, developing it in C# from a preliminary phase into a working product ready to perform smoke, end-to-end, acceptance and regression tests

Soprano for Spotify (Node.js, Firebase, Angular)

October 2019 - April 2020

- A web app that allows users to setup playlist trees songs added to a playlist get added to ancestors
- Lead a small dev team of classmates, developing skills in project management and software design
- Structured the project to be easily extendible and allow new features such as locking playlists, tracking listening habits, and auto-generate playlists with the user's most listened songs

C EasyDocs (DeltaHacks V) (Python, SQL, Django & Javascript)

January 2019

- A web application for general practitioners that generates patient information templates, highlighting important data & potential medical issues
- Designed an intricate **SQL** database to relate medical ailments, treatments, side-effects, conflicting medicines, family histories, as well as HCP, patient and scheduling data
- Implemented risk assessment for medical conditions based on patient data & other risk factors
- Analyzed patient illnesses, treatments & side-effects to warn healthcare providers of potential conflicts

O LocalizeCS (Bash)

October 2018

- Created a command-line program allowing users to create and sync local versions of remote environments as a solution to the frustrations of completing assignments on UWaterloo's remote servers
- Built Git-inspired functionality to push, pull, sync and "diff" changes between the environments
- Implemented features that allow remote execution of commands and easy connection to the remote
- Shared the program amongst classmates and peers who frequently use it for assignments

Bite-sized fun Projects (Various Languages)

- **O** FoosBoard A modular express application that allows users to track workplace foosball games via Slack with team names, smart leaderboards and player stats
- • 10FasterFingers Chrome extension that allows users to cheat on several typing test websites. Used a javascript OCR library to outwit the anit-cheat measures.
- • Ride The Bus Developed a program in C# that simulates a card game. Programmed and analysed different playing strategies and their efficacy
